

Remote Work Security Policy

Document Type: Information Security Policy
Policy Year: 2026

1. Purpose

This policy defines security requirements for employees who access enterprise systems, applications, or information while working remotely.

2. Device Security

Employees must use company-managed devices whenever available. Devices must use screen locking, current security updates, and approved endpoint protection. Employees must not disable security controls.

3. Network Access

Remote access to internal systems must use the organization's approved secure access mechanism. Public or unsecured Wi-Fi should not be used for sensitive enterprise information unless an approved secure connection is active.

4. Data Protection

Confidential business information must not be stored on personal cloud drives or transferred to unauthorized applications. Sensitive documents should be accessed only by authorized personnel.

5. Security Incident Reporting

Lost devices, suspected account compromise, accidental disclosure, phishing attempts, or other security incidents must be reported to the IT security team as soon as possible.

6. Remote Work Security Checklist

Requirement	Required
Use approved device	Yes
Keep security updates enabled	Yes
Use approved secure remote access	Yes
Store sensitive data in unauthorized cloud services	No
Report suspected security incidents	Yes

Synthetic test document created for validating the document upload and incremental re-indexing workflow.
